

MedGyn HSG Catheter

MedGyn's HSG catheter are used for administering contrast media or saline during Hysterosalpingography and Sonohysterography procedures to detect uterine pathology and tubal occlusion. MedGyn's HSG catheter is a disposable balloon catheter with a rigid insertion sheath. A syringe is included for balloon inflation.

Features & Benefits

- Ideal for hysterosalpingography and sonohysterography
- Sterile, disposable, and latex free
- 5Fr. and 7Fr. sizes for easy insertion
- Placement sheath decreases the need for a tenaculum
- Allows for clear view of external cervical OS
