

MedGyn Intrauterine Insemination Catheter (IUI)

The MedGyn Intrauterine Insemination Catheter is a sterile, disposable, flexible catheter designed for use in intrauterine insemination. This product was designed for the introduction of prepared sperm solution into the cavity of the uterus. The soft material and smooth rounded tip helps avoid damage to the uterine wall or fundus yet the rigidity of the introducer stylet makes entry through the cervical canal simple and less traumatic for the patient.

Features & Benefits

- Catheter tip is rounded and beveled for patient comfort
- Full length: 21cm with two holes at the distal end
- Mini and Mini Curved length is 21cm with single hole at the distal end

022723 MedGyn Intrauterine Insemination Catheter - Regular/Straight (25/bx)

022724 MedGyn Intrauterine Insemination Catheter - Mini (25/bx)

022725 MedGyn Intrauterine Insemination Catheter - Mini Curved (25/bx)
